

PreVision Design has completed an analysis of the potential new shading impacts that would be caused by the proposed construction of a three-building development to be located at 2800, 2820 and 2855 Broadway in Oakland, CA (the "Project") on the stained glass windows of Temple Sinai, located at 2808 Summit St, directly across Broadway and due west of the Project.

The analysis was conducted to determine whether or not the new project would result in new shadow that would fall on the windows between 7:15am through 12:30pm at any time throughout year and, if present, how much shadow would be generated and when would it occur. The analysis times were chosen as they correspond to times of day where active uses occur within Temple Sinai which could potentially be adversely impacted by a reduction in sunlight on the stained glass windows.

In order to perform this study, the project architect (BAR Architects) provided a 3D CAD model of the proposed project as well as an accurately located model of the Temple Sinai and the windows in question (derived by a survey "point cloud"). PreVision Design additionally gathered existing building and topographical data for the urban environment surrounding the proposed project which contributes to the existing shading conditions on the windows. This data was aggregated and used to build a virtual 3D full area model which was used to simulate shading and calculate the shading impacts Project.

PreVision Design's analysis evaluated the area of shading over time (sf/hr) currently present on the stained glass windows vs. what *additional* shading would be cast by the Project, and presented both as both a total sf/hr of shadow as well as a percentage of the Theoretical Available Sunlight (TAS) that could fall on the windows (presuming no shadows from any source). Shading calculations were taken every seven days throughout the Solar Year (Summer Solstice through Winter Solstice) at 5-minute intervals with intermediate dates and times extrapolated to establish the full range of shading conditions on the windows between 7:15AM and 12:30PM daily throughout the year. The results of this analysis indicated that the Project would not result in any new shading on the stained glass windows of Temple Sinai between the hours of 7:15AM and 12:30PM daily throughout the year.
